Control-M on the Cloud

Accelerate digital business automation on AWS and Azure

PRODUCT DESCRIPTION

Control-M is an enterprise class workload automation solution that simplifies the management and monitoring of batch processes. Control-M integrates all aspects of batch processing into a single viewpoint, providing an increased span of control, improving productivity, and reducing errors and delays. Running Control-M on AWS and Azure improves flexibility and scalability. Using interactive deployment or DevOps automation tools, Control-M environments are easily provisioned within minutes, leveraging the benefits of cloud-based databases and infrastructure services.

BUSINESS CHALLENGE

Companies today are increasingly challenged with delivering digital services faster than ever before. This need for speed has driven companies to shorten the time for delivering the applications that power modern digital services. Public cloud providers have innovated to provide services that allow provisioning of platform and infrastructure in virtually a single-click operation, with unmatched scalability and flexibility. With infrastructure provisioning down to minutes, **companies are now looking for ways to achieve the same level of agility to install and configure applications that need to run on the cloud platform**.

BMC SOLUTION

Control-M delivers the next wave of IT automation—**Digital Business Automation**—moving beyond traditional workload automation and adapting to modern IT technologies and processes. Control-M can be installed and configured in minutes on leading public cloud platforms, including Amazon Web Services® (AWS) and Microsoft® Azure®. **With fast and easy provisioning of Control-M, companies can benefit from the economies of scale offered by cloud platforms and increase speed and agility to meet business demands**. Users get full Control-M capabilities, plus the elasticity, scalability, and high availability of leading cloud platforms.

KEY FEATURES

Running **Control-M** on cloud platforms increases economies of scale, speed, and agility.

- **Automated provisioning** – Organizations that want to run Control-M on AWS or Azure can have it configured and ready in minutes

- **Complete workload automation functionality** – All Control-M features for workload development, scheduling, management, and integration can run in the cloud

- **Easy access to cloud services** – Easier access to cloud services, including Amazon Web Services (AWS), Relational Database Services® (RDS), and Elastic Compute Cloud® (EC2), significantly reduce costs related to licensing and labor

- **Security compliances** – Comply with restricted standards such as AWS Direct Connect, VPC, and VPN

KEY BENEFITS

- **Installed and configured in minutes** – Safely provision Control-M on the cloud in minutes

- **Fully scalable** – Enterprises can save on storage and infrastructure costs while getting all the capacity they need on demand

- **Simplified management** – High availability, database maintenance, and other time-consuming tasks become the cloud provider's responsibility, freeing enterprise staff for more productive activity

< Run Control-M on leading public cloud platforms—at the speed of business. Control-M environments are provisioned on cloud platforms within minutes.

PRODUCT DETAILS

Amazon Web Services support: Quick setup and deployment of Control-M core components via AWS Marketplace include EC2 machine and Postgres RDS.

Access more AWS services: With Control-M Application Integrator, you can quickly access additional AWS services, including AWS Data Pipeline for accessing and moving data and workloads.

Azure support: Run Control-M on the Azure public cloud using a simple VM extension.

Multi-cloud support: Control-M components can be deployed on different public cloud vendors, such as AWS and Azure.

Hybrid cloud support: Provide the ability to run workloads across on premise datacenters, public cloud and private cloud.

Support diverse configurations: Start from applications (agents) to a full Control-M deployed on the cloud.

Full Control-M functionality: Control-M on the cloud offers all features of Control-M. You get an enterprise-class workload automation solution for complete lifecycle management without having to worry about key configuration, provisioning, and infrastructure maintenance tasks.
